Woodfuel in the Cairngorms National Park

Penny Lawson, Cairngorms National Park Authority
Types of Woodfuel

Logs
- for fires, stoves or boilers
- domestic, farms, communities or estate installations

Chip
- for boilers (40 KW+)
- business, community, public sector
- bulk delivery

Pellet
- for stoves and boilers
- compressed wood by-products
- bulk or bagged delivery

Sources
- forests and woodlands
- saw mill residue and co-products
- tree surgery and landscaping
- short rotation crops
Why woodfuel? 11% of Scotland’s heat from renewables by 2020

Pro’s

• Cut heating costs
• Reduce CO₂ emissions – carbon neutral
• Local supply
• More personal control/flexibility (logs)
• Link to better woodland management
• Support for local businesses
• Opportunities for community enterprise

Con’s

• Need space for fuel storage and installation
• Handling of fuel?
• Security of supply
• Capital cost

• It’s new and different!
Cost savings

Fuel costs – indicative (Dec 2012)

Grants and loans – eg Renewable Heat Incentive (RHI)

Phase I and II

based on KWh heat produced
Heating system selection

The flowchart shown in Figure 4 is designed to assist with the selection of the most appropriate combination of woodfuel and heating boiler or stove.

START

1. Information on suitable woodfuel and energy options is available from the supplier.
2. A basic assessment of the fuel supply is made, including the availability of woodfuel from sustainable sources.
3. The fuel type selected is determined by the energy requirements of the property.
4. The fuel is then selected based on the type of heating system required.
5. The heating system is selected based on the frequency of delivery.
6. The heating system is then selected based on the energy requirements of the property.
7. The heating system is then selected based on the energy requirements of the property.
8. The heating system is then selected based on the energy requirements of the property.
9. The heating system is then selected based on the energy requirements of the property.
10. The heating system is then selected based on the energy requirements of the property.
11. The heating system is then selected based on the energy requirements of the property.
12. The heating system is then selected based on the energy requirements of the property.
13. The heating system is then selected based on the energy requirements of the property.
14. The heating system is then selected based on the energy requirements of the property.
15. The heating system is then selected based on the energy requirements of the property.
16. The heating system is then selected based on the energy requirements of the property.
17. The heating system is then selected based on the energy requirements of the property.
18. The heating system is then selected based on the energy requirements of the property.
19. The heating system is then selected based on the energy requirements of the property.
20. The heating system is then selected based on the energy requirements of the property.
21. The heating system is then selected based on the energy requirements of the property.
22. The heating system is then selected based on the energy requirements of the property.
23. The heating system is then selected based on the energy requirements of the property.
24. The heating system is then selected based on the energy requirements of the property.
25. The heating system is then selected based on the energy requirements of the property.
26. The heating system is then selected based on the energy requirements of the property.
27. The heating system is then selected based on the energy requirements of the property.
28. The heating system is then selected based on the energy requirements of the property.
29. The heating system is then selected based on the energy requirements of the property.
30. The heating system is then selected based on the energy requirements of the property.
31. The heating system is then selected based on the energy requirements of the property.
32. The heating system is then selected based on the energy requirements of the property.
33. The heating system is then selected based on the energy requirements of the property.

98. The heating system is then selected based on the energy requirements of the property.
99. The heating system is then selected based on the energy requirements of the property.
100. The heating system is then selected based on the energy requirements of the property.
How much is woodfuel used in the Park?

Cairngorms NP – Woodfuel use (odt/yr) 2011

19 installations (automated or semi-automated only)
   16 industrial/commercial
   3 domestic

Total 3.88 MW capacity

2.42 thousand odt/yr woodfuel used,
99% in ind/comm sector

97% of this is wood chip, rest pellet

Of this, 400 odt produced in CNP

www.cairngorms.co.uk
Who is using woodfuel?

14 of 16 installations using chip

45% used by forest industry itself (one local sawmill and one processing plant)

Estates, housing scheme

Community uses 12%
Incl. care home
Can we grow enough wood?
(Calculated for National Park alone...)

For heating and hot water for all buildings in CNP  
approx 100,000 tonnes/yr

This is equivalent to 20% of annual increment of all woodland, but....
• Other demands
• Market forces
• Availability

Can we ensure enough supply of woodfuel?

Grampian and Cairngorms NP, Woodfuel production odt/yr (2011)

<table>
<thead>

</tbody>
</table>
| Logs  | 2,100   | 2,500   | ie there is extra capacity
What could we achieve?

20,000 tonnes/yr woodfuel

20% of heat demand in Park

16% reduction in CO2 emissions

Equivalent to
- Kingussie
- Newtonmore
- Carrbridge
- Nethybridge
Welcome to low carbon Cairngorms.

Adapting to climate change and cutting greenhouse gases are vital to ensure Cairngorms National Park thrives. The new five year Partnership Plan (2012-2017) for the Park sees households and businesses adapting to a low carbon economy as a key measure of success.

Using renewable sources of energy to heat our homes, businesses and public spaces is something many people can do, and there is lots of help and information out there for the taking to make it as easy as possible. Using wood for heat can save you money too – good for the planet, good for your pocket!

Explore whether logs, chips or pellets would be the best option for you. Learn about woodfuel heating systems, browse our directory to find an installer or buy woodfuel and find out how to store and season firewood. Discover how to manage woods for fuel, get into the firewood business or work together with friends and neighbours to create a community woodfuel scheme. Find out why farmers and land managers are turning to trees and exploring new ways to collaborate to meet the increasing demand for quality firewood.

Putting woodlands to work

Small woodlands on farms are increasingly being looked upon...
Woodfuel Suppliers’ Directory

If you’re looking for somewhere to buy firewood, wood chips or pellets, or want to find out who can supply and install woodfuel heating for you in the Cairngorms area, you’re at the right place.

The list of suppliers is growing – so if you don’t find someone this time round check back – or if you, or someone you know, should be listed here, please contact us.

Enter a town name in Directory Search on the right to search for all woodfuel businesses in or near a particular town, or select a business category which will display them on the map.

If you would like to amend your details or request your business is added click here.

Check out the Usewoodfuel directory and the Usegreenheat site for more listings outwith the Cairngorms National Park.
